

20-foot folding container for wastewater treatment plants

Overview

What is a containerized wastewater treatment plant?

A containerized wastewater treatment plant is a wastewater treatment system that is fully integrated into a container. For uncomplicated and fast transportation, we use 10, 20 and 40-foot shipping containers in accordance with the international ISO standard for our KLARO container systems.

What size container sewage treatment plant do you use?

For uncomplicated and fast transportation, we use 10, 20 and 40-foot shipping containers in accordance with the international ISO standard for our KLARO container systems. Container sewage treatment plants are mainly used for short-term use in remote areas that are not connected to a sewage system, in camps and on construction sites.

How long does a containerized wastewater treatment plant take?

We offer a variety of capacities that can meet your requirements. As the pre-assembled containerized wastewater treatment plant is located inside a standard 20 or 40 foot shipping container, it can be relocated and installed with ease at other locations. In most cases it is a one to two-day operation and requires only a flatbed truck and a crane.

What are the advantages of a containerized wastewater treatment system?

Compact and portable: They require minimal space and can be easily transported wherever needed. A standard 20-foot container can hold a system capable of treating wastewater for dozens of people. Rapid deployment: Containerized systems are pre-assembled and ready to use upon arrival, perfect for disaster relief or temporary needs.
