

# **ASEAN has mobile power signal base stations**

## Overview

---

What is the ASEAN Power Grid (APG)?

Ensuring a secure and stable electricity supply is critical, and the ASEAN Power Grid (APG) aims to achieve this through regional energy integration, enhanced grid infrastructure, and a unified power market.

Why should ASEAN invest in power generation capacity?

ASEAN recognises the critical role of efficient, reliable and resilient electricity infrastructure in stimulating regional economic growth and development. To meet the growing electricity demand, huge investments in power generation capacity will be required.

Why is ASEAN a good place to invest in electricity?

ASEAN is one of the fastest developing economies in the world. With the rapid expansion of population and economic activities, the regional electricity demand is expected to boom. The pursuit of cross-border power transmission and trade between member states has been one of the key considerations to meet the increasing electricity demand.

How to achieve the full potential of the ASEAN Power Grid?

To achieve the full potential of the ASEAN Power Grid, the development of the power generation mix, technological innovations and transmission technologies are needed to be well embedded in the joint planning of infrastructure development.

### Base stations and networks

Base Stations Enable Mobile Communications Antennas Are Placed in Various Locations More Mobile Devices Means More Base Stations Base Station Output Power Is Low Exposure Limits Are Set by Independent Organizations Exposure Levels Are Much Lower Than The Limits Public Access Is Restricted Where Needed No Adverse Health Effects According to The Who The antenna output power level is typically between 10 and 100 watts for an outdoor base station. Television transmitters, by comparison, usually have a thousand times higher output power than outdoor base stations. Antennas mounted indoors have about the same power as mobile phones.
