

Air-cooled solar container battery compartment structure

Overview

What is a containerized storage battery compartment?

The containerized storage battery compartment is separated by a bulkhead to form two small battery compartments with a completely symmetrical arrangement. The air-cooling principle inside the two battery compartments is exactly the same.

What is a containerized energy storage battery system?

The containerized energy storage battery system comprises a container and air conditioning units. Within the container, there are two battery compartments and one control cabinet. Each battery compartment contains 2 clusters of battery racks, with each cluster consisting of 3 rows of battery racks.

Where does cooling air go in a battery pack?

The lower left side of the battery pack is the inlet of cooling air, and the upper right side is the outlet of cooling air. The battery pack is surrounded by baffles. The cooling air enters the battery pack from the inlet to cool the heated battery, and then flows out of the battery pack from the outlet.

Why are forced air cooling systems used in battery thermal management systems?

Forced air cooling systems are widely used in battery thermal management systems because of their simple structure, low cost, and light weight. According to the arrangement of the batteries, the air-cooling system can be either serial or parallel.
