

# All in one solar power system in Mongolia

## Overview

---

Does Mongolia have a solar power plant?

Covering more than 70% of the total territory, the steppe and Gobi Desert has a long duration of sunshine and vast reserves of clean energy, so it can be used to meet the energy consumption of the region. “Seven solar power plant proves this,” said Mongolia Prime Minister Oyun-Erdene Luvsannamsrai.

Does Mongolia have a 10 MW solar farm?

Mongolia has connected a 10 MW solar farm to the grid, as part of a plan to deploy 40.5 MW of solar and wind capacity in the nation’s western regions. The Asian Development Bank (ADB) and the government of Mongolia have inaugurated a 10 MW solar power plant in Mongolia's Govi-Altai province.

How will Mongolia's wind power plant be financed?

The power plant is financed by ADB’s Upscaling Renewable Energy Sector Project which supports 41-megawatts of distributed renewable energy systems through subprojects that will supply clean electricity and heat in the less-developed region of western Mongolia. “About 10% of our country's territory is suitable for wind energy use.

What is the power system of Mongolia?

The power system of Mongolia consists of the three unconnected energy systems (Central, Western and Eastern Energy System), diesel generators and heat-only boilers in off-grid areas. The Western system provides three province (Aimag) centres and its 22 district (Soum) centers with electricity imported from Russia.
