

Andorra Emmes Energy Storage Field

Overview

What does the Emmes report tell us about energy storage?

The report provides insights into the energy storage landscape, with data and analysis across 3 market segments: residential, commercial & industrial, and utility-scale storage. Key takeaways from the EMMES 9.0: 2024 has been a record year for energy storage deployment.

How has 2024 been a record year for energy storage deployment?

Key takeaways from the EMMES 9.0: 2024 has been a record year for energy storage deployment. 89 GW of energy storage capacity is currently installed across various technologies in Europe. In 2024, new installations led to 60% MW/ 280% MWh increase in Front-of-the-Meter storage capacity.

How many GW of energy storage capacity are there in Europe?

89 GW of energy storage capacity is currently installed across various technologies in Europe. In 2024, new installations led to 60% MW/ 280% MWh increase in Front-of-the-Meter storage capacity. By 2030, an additional 128 GW / 300 GWh of electrochemical storage is projected to be added to European grids.

How many GW of energy storage will Europe have in 2025?

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage in November 2025. This milestone represents enough capacity to meet the peak electricity demand of Germany and the Netherlands.
