## Overview

---

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels – if used appropriately.

Do bifacial solar panels produce more energy?

Bifacial solar modules use both sides of the panel to produce energy. Manufacturers say that bifacial solar panels can generate up to 30% more energy than monofacial panels. Great news for those with limited roof space. Most bifacial panels are frameless and covered by tempered glass on both sides.

Are bifacial solar panels a smart upgrade?

Bifacial solar panels are a smart upgrade for anyone looking to get more energy from the same space. Since they can capture sunlight from both sides, they often produce more electricity than regular panels. They're also built to last longer and look sleeker.

Are bifacial solar panels suitable for rooftop installations?

Bifacial solar panels are not suitable for rooftop installations but may work well with residential ground-mounted solar systems. The ideal use case for bifacial solar panels is in commercial and utility-scale solar installations.
