## Overview

---

What is a battery management system (BMS)?

A BMS monitors the temperatures across the pack, and open and closes various valves to maintain the temperature of the overall battery within a narrow temperature range to ensure optimal battery performance. Capacity Management Maximizing a battery pack capacity is arguably one of the most vital battery performance features that a BMS provides.

How do battery management systems work?

Battery management system (BMS) is technology dedicated to the oversight of a battery pack, which is an assembly of battery cells, electrically organized in a row x column matrix configuration to enable delivery of targeted range of voltage and current for a duration of time against expected load scenarios.

What is a battery balancing system (BMS)?

Cell balancing: Over time, the cells in a battery pack can become unbalanced, with some cells having higher or lower charge levels than others. A BMS can balance the cells by ensuring each cell is charged and discharged evenly, which helps maximize the battery run time.

What is a multi-master battery management unit (BMS)?

NX-Tech's BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.
