

# **Busan South Korea promotes new energy storage power stations**

## Overview

---

Will South Korea install 540 megawatts of battery energy storage systems?

The Ministry of Trade, Industry and Energy unveiled plans for a nationwide tender to install 540 megawatts of battery energy storage systems (BESS), marking the country's first major government-led deployment of its kind. The project is part of a broader effort to modernize South Korea's power grid and support the transition to renewable energy.

Are South Korean companies investing in energy storage systems?

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

Why should South Korea deploy long-duration storage?

Deploying long-duration storage will allow Korea to capture surplus renewable energy during these off-peak periods and shift it to peak demand hours, reducing curtailment and maximizing asset utilization. This tender fits within South Korea's broader decarbonization roadmap.

Why is South Korea launching a 540mw battery energy storage tender?

South Korea is ramping up its battery energy storage deployment with a new 540MW tender to stabilize the grid and support renewable energy growth. Learn how this move strengthens both domestic resilience and global market leadership.

## Busan South Korea promotes new energy storage power stations
