

# Can the inverter power supply use a battery

## Overview

---

Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

What type of batteries are used in inverter systems?

The most commonly used batteries in inverter systems are tubular lead-acid batteries and flat plate lead-acid batteries, with lithium-ion batteries becoming more popular in recent years. Tubular batteries are preferred for their deep discharge capacity and long life, making them ideal for homes with frequent power cuts.

Why do you need a battery connection for an inverter?

The DC comes from the batteries which are used to power the inverter, and this inverter transforms the power into AC usable by bulbs, fans, and other small electrical devices. You must go through battery connection for inverter while considering the risks of electrical shocks, damage to devices, so that potential fire risks are avoided.

Do inverters and batteries need to match?

The inverter and batteries must match in terms of voltage, capacity, and power output. If you are using a 12V battery, then the input voltage of the inverter must match the battery voltage. If the specifications of the battery and the inverter do not match, the system will not operate stably and may even damage the equipment.
