

# Communication building rooftop base station

## Overview

---

What is a rooftop Telecom Tower?

Rooftop telecom towers, often called rooftop cell towers or roof top antenna towers, are specialized structures installed on building rooftops to support antennas and equipment for wireless communication. Typically ranging from 3 to 30 meters in height, these towers use hot-dip galvanized steel (ASTM A123) for over 30 years of durability.

What is a rooftop tower?

A Rooftop Tower is a steel supporting structure installed on building rooftops for telecommunications equipment. These towers serve as mounting platforms for antenna arrays, microwave dishes, and other communication systems while requiring less height than ground-based towers, making them cost-effective solutions for urban deployments.

What is a rooftop antenna tower?

Roof top antenna towers facilitate radio, TV, and Wi-Fi signal transmission. In Chicago, rooftop antennas support local TV broadcasting, leveraging telecom rooftop towers for reliable signal delivery. Rooftop telecommunication towers provide last-mile connectivity for wireless internet service providers (WISPs) and utilities.

Are rooftop telecom towers a good investment?

Rooftop telecom towers offer significant advantages for telecom operators and property owners: **Space Efficiency:** Towers on rooftops utilize existing structures, saving valuable urban land. **Cost-Effectiveness:** Save 15-20% on installation costs compared to ground towers, with deployment in days.
