

# **Difference between the front and back numbers of energy storage batteries**

## Overview

---

What is a battery energy storage system?

The electrochemical device central to this solution, known as a Battery Energy Storage System (BESS), captures energy during charging and releases it as electricity or other services as needed. BTM BESS specifically refers to stationary storage systems connected to the distribution system on the customer's side of the utility's service meter.

What are the different types of energy storage?

As energy storage continues to revolutionize the renewable energy landscape, two major types of deployment have emerged: Front-of-the-Meter (FTM) and Behind-the-Meter (BTM) energy storage.

What is behind-the-meter energy storage?

With a background in environmental science, he has a deep understanding of the issues facing our planet and is committed to educating others on how they can make a difference. Behind-The-Meter (BTM) energy storage involves integrating storage systems, such as batteries, allowing users to store excess electricity.

What is behind the Meter (BTM) energy storage?

A 100 MW grid-scale battery system that absorbs excess solar power during the day and releases it in the evening to balance grid demand. What is Behind-the-Meter (BTM) Energy Storage?

Behind-the-Meter (BTM) energy storage is installed on the customer's side of the electricity meter, serving homes, businesses, and industrial facilities.
