

Double glass module manufacturer in Rotterdam the Netherlands

Overview

What is a glass-glass PV module?

Glass-Glass PV Module In the past and currently, the standard photovoltaic module has been manufactured using 3.2 -4mm glass on the front and a polymer-based insulating back she. ViaSolis is an international manufacturer of PV glass and provider of solar energy solutions. The company operates one of the most advanced production facilities in EU.

What is the difference between glass and plastic solar modules?

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro cracks and thus ensures long-term operating life of 40 years and more.

What is glass/glass composite?

The Glass/Glass composite protects solar cells against micro cracks and thus ensures long-term operating life of 40 years and more. The solid connection between the two glass layers ensures for higher resistance and torsional stiffness. TÜV tests show that Sonnenstromfabrik Glass/Glass modules can handle loads up to 8.100 Pa.

How much load can a glass/glass module handle?

TÜV tests show that Sonnenstromfabrik Glass/Glass modules can handle loads up to 8.100 Pa. Different to glass/foil modules, Glass/Glass modules are resistant to damages resulting from ammonia in agricultural and industrial installations as well as resistant to damages from salt spray in coastal regions or sand abrasion in desert regions.
