

East Asia Energy Storage Valley Project

Overview

How many pumped storage facilities are there in China?

For China, this average is from 315 projects, far and away the highest number of pumped storage facilities recorded in the world. In September 2021, China's National Energy Administration (NEA) released its "Mid-term and Long-term Development Plan for Pumped Storage Hydropower 2021-2035." The official goal is to reach.

Which China provinces have the largest pumped storage capacity?

In the central China region, the provinces of Zhejiang, Hubei, and Hunan possess the largest prospective capacities in the pipeline, with 95 GW across 79 projects. Moreover, 13 provinces that do not presently have any operating pumped storage facilities boast over 127 GW of prospective capacity.

Which country has the most pumped storage capacity?

China is the top-ranked country in terms of operating PSH capacity with 50.7 GW, holding 30% of the world's total. This is roughly equivalent to the combined PSH capacity of all European countries. China's current share of global prospective capacity exceeds 80%, making it the primary country for the development of the pumped storage industry.
