

# **Financing of 120-foot photovoltaic container for oil refineries**

## Overview

---

Can solar energy drive crude oil refineries?

Employing solar energy to drive crude oil refineries is one of the investigated pathways for using renewable energy sources to support lowering the carbon emissions and environmental impact of operating the processing of fossil-based fuels.

Can solar energy systems decarbonize oil refineries?

Other studies in the literature considered coupling solar energy systems to oil refineries to decarbonize their operation. The applicability and feasibility of introducing a concentrated solar power (CSP) system to reduce partial reliance on process heaters of a crude oil refinery was studied by Danish et al.

What are long-term investment loans for oil refineries?

Long-term investment loans for the construction of oil refineries have extended repayment periods, often ranging from 10 to 30 years. The extended tenure allows the borrower (refinery developer) to spread out the repayment over the project's operational life, reducing the burden of debt repayment.

Can solar-assisted petrochemical refineries greenize oil refineries?

This paper proposes a solar-assisted method for a petrochemical refinery, considering hydrogen production deployed in Yanbu, Saudi Arabia, as a case study to greenize oil refineries.
