

Fire control of electrochemical energy storage power station

Overview

Firstly, conduct research on electrochemical energy storage laws, related legal issues, and various energy storage policies; Secondly, analyze the basic principles of electrochemical energy storage, and determine the energy supply performance of electrochemical energy storage stations based on the cyclic conversion mode of electrical and chemical energy in energy storage stations, in order to carry out targeted fire safety supervision; Finally, identify the loopholes in fire safety laws and propose corresponding governance and rectification suggestions. What are the characteristics of electrochemical energy storage power station?

2.2 Fire Characteristics of Electrochemical Energy Storage Power Station
Electrochemical energy storage power station mainly consists of energy storage unit, power conversion system, battery management system and power grid equipment.

How is information transmitted between fire control room and energy storage station?

The information between the fire control room and each energy storage station can be transmitted by optical cable or wireless communication, and based on the communication protocol DL/T634.5101 and DL/T634.5104, the relevant secondary equipment is deployed in the security II area.

Can energy storage power stations monitor fire information?

Fire information monitoring At present, most of the energy storage power stations can only collect and display the status information of fire fighting facilities (such as fire detectors, fire extinguishing equipment, etc.) in the station.

Are electrochemical energy storage power stations dangerous?

However, with the increase of projects of the electrochemical energy storage power station year by year, some electrochemical energy storage power stations have suffered safety accidents in turn, and the fire danger has

emerged gradually.
