

Gabon Communications 5G Base Station Working Function

Overview

What is a 5G base station?

Additionally, 5G base stations will rely heavily on network slicing and edge computing to provide customized network experiences for different applications, ranging from autonomous vehicles to smart cities. Base stations are the backbone of modern wireless communication networks.

What is a 5G baseband unit?

The 5G baseband unit is responsible for NR baseband protocol processing, including the entire user plane (UP) and control plane (CP) protocol processing functions, and provides the backhaul interface (NG interface) with the core network and the interconnection interface between base stations (Xn interface).

What frequency bands do 5G base stations use?

Utilization of Frequency Spectrum: 5g Base Stations Operate in specific Frequency Bands Allocated for 5G Communication. These bands include Sub-6 GHz Frequencies for Broader Coverage and Millimeter-Wave (Mmwave) Frequencies for Higher Data Rates.

How does 5G work?

5G base stations often employ beamforming techniques to focus the radio waves in specific directions, optimizing coverage and capacity. This is achieved by adjusting the phase and amplitude of the signals transmitted by multiple antennas. 5G operates in a range of frequency bands, including sub-6 GHz (mid-band) and mmWave (millimeter-wave) bands.
