

# **High-efficiency folding container for scientific research stations**

## Overview

---

Can a 5-tier stacking foldable container be economically produced?

This paper presents the design of a new 5-tier stacking foldable container with convenient folding and unfolding process and that can be produced economically compared to previous products. The selected size of the container is the standard 40-ft high cube because it represents about 70% of the maritime container fleet transiting Korean ports.

Are foldable containers effective in repositioning empty containers?

Foldable containers are considered an effective solution to deal with the endemic imbalance in the repositioning of empty containers. Several foldable containers were commercialized without clear breakthrough in the market and most current researches are still limited to small pilot projects.

What is a fold container house?

The fold container house is a modular building constructed from prefab modular containers specially designed to fold and unfold. This unique feature allows for easy transportation and rapid assembly, making them ideal for a wide range of temporary or moveable housing needs. Generally speaking, 3 workers can install at least 100 sets in 5 days.

Are foldable containers economically viable?

In order to examine the economic viability of the developed foldable container as compared to a standard 40-ft high-cube container, cost analysis is performed for an example route, i.e., the Busan-Vostochny-Moscow route (Fig. 10), which involves both inland and maritime transportation.
