How to charge solar lights?

The best way to charge solar lights is with sunlight. However, even if you don't have access to direct sunlight, you can still charge your solar lights in other ways. In overcast or winter weather, you can easily charge solar lights with indirect sunlight. What's more, you can even charge your solar lights with no sunlight at all!.

How long should you charge a solar light?

For best results, charge your solar panels for at least 12 hours if you're using incandescent lights. Use LED lights to charge a solar light when you're far from home. Battery-operated LED lights, like LED flashlights, are also able to charge solar lights.

Can solar lights charge indoors?

Solar lights have transformed outdoor lighting with their convenience and eco-friendly operation. However, when faced with extended periods of cloudy weather, winter darkness, or installation in shaded areas, many users wonder: can solar lights effectively charge indoors?

The answer is yes—with some important caveats and specific techniques.

How long does it take to charge a solar panel?

Typically, solar cells respond to any strong light as they run at similar wavelengths and spectrum. Simply place your household lights a few inches away from the surface of the panels. It's worth nothing that it might take considerably longer to charge — up to 12 hours, depending on the wattage of the bulb.
