

# How big an inverter should I use for outdoor surveillance

## Overview

---

How big should a solar inverter be?

To account for power losses assume an 80 percent efficiency. Your solar inverter should have a similar or slightly higher wattage rating than the DC output of your solar panels (which in this case is 4.5 kW). You can size it between 1.15 and 1.5 times larger. The rule of thumb is to size your inverter 1.25 bigger than your solar array.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What is a recommended inverter power range?

By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity. This approach ensures that your inverter is neither under-sized—risking energy losses and performance issues—nor oversized, which can lead to unnecessary costs.

Can a solar inverter be too big?

Oversizing or having an inverter that is too big for your solar panels will not produce enough electricity. Undersizing or having an inverter that's too small will convert a limited amount of energy. You can avoid both of these scenarios by following these three basic steps to solar inverter sizing.
