

How big is a 500W monocrystalline silicon solar panel

Overview

Are 500 watt solar panels bigger?

500-watt solar panels are bigger than your average solar panel. Typically made up of 144 half-cut monocrystalline cells, their large size makes 500-watt solar panels more commonly seen in commercial, ground-mounted, and utility solar projects. For residential solar projects, is bigger always better?

That's not necessarily the case.

Which solar panels are made of monocrystalline PERC cells?

In 2020, two solar module firms – Risen Energy and Trina Solar – revealed their 500-watt solar panel made of half-cut monocrystalline PERC cells. Recently, we discussed conventional solar panel cell architecture. The primary variations within the marketplace are monocrystalline and polycrystalline, and thin-film.

What are the dimensions of a solar panel?

Their dimensions vary depending on the power, but they are generally found in rectangular formats (160 x 80 cm, 200 x 100 cm, etc.). These panels use polycrystalline silicon cells, which are slightly less efficient than monocrystalline cells but also less expensive. Their dimensions are similar to those of monocrystalline panels.

Are 500 watt solar panels suitable for residential spaces?

However, as we will explain later, 500-watt solar panels are not yet optimal for residential spaces. This is because the existing variety of 500-watt solar panels is still relatively large — 72 cells spanning 2.2 meters by 1.1 meters. This makes them more suitable for large commercial and industrial setups.

The typical footprint of a single 500 W panel is about 27.5 square feet (7.40 feet x 3.72 feet). In terms of weight, 500 W panels weigh about 71.2 lbs (32.3 kg) each. That's a lot heavier than the average weight of solar panels of between 40 and 50 pounds.
