## Overview

What is battery management system (BMS)?

Battery Management System (BMS) role in battery packs and energy storage system is critical to ensure safe operation and extend lifetime.

What is a BMS in a battery pack?

A BMS is a PCBA (printed circuit board assembly) in the battery pack. The main components mounted on the BMS printed circuit board include:  
Microcontroller (MCU): It gathers and processes current signals from the CCS to monitor the voltages and temperatures of the cells.

What are the components of a lithium-ion battery pack?

In the lithium-ion battery pack, there are the main electronic modules: the batteries (cells) connected in groups in parallel and series, the cell contact system, and the BMS (battery management system). The BMS is the brain of the battery pack.

What is a battery management system?

A battery management system is a high-voltage PCBA with various components mounted on it. It acts as the brain of the lithium-ion battery pack for EVs, solar energy systems, etc. If you want battery management systems for your custom battery packs, contact the one-stop BMS manufacturer PCBONLINE by email or from the online chat window.
