

# How many watts do indoor solar lights require

## Overview

---

How many watts of solar power do I Need?

A general rule of thumb is that you'll need one watt of solar power for every hour that you want to run your lights. So, if you want to run your lights for 8 hours per day, you'll need an 8-watt solar panel. Of course, there are other factors to consider as well, such as battery efficiency and cloud cover.

What size solar panel do I Need?

The size of the solar panel you need will depend on a few factors, including the wattage of the lights and the average amount of sunlight your location receives. A general rule of thumb is that you'll need one watt of solar power for every hour that you want to run your lights.

How much electricity does a 100 watt solar panel use?

A typical 60-watt incandescent light bulb uses about 0.06 kilowatts (kW) of electricity per hour. This means that a 100-watt solar panel could theoretically power than a 40 watt solar panel. However, incandescent bulbs are being phased out in favor of more efficient options like LED lights that stay on all night.

How many solar panels do I need to run a grow light?

You may be wondering how many solar panels you need to run a grow light. The answer depends on a few factors, including the type of grow light you are using and the amount of sunlight your location receives. If you are using a standard incandescent grow light, you will need about 40 watts of power per square foot of growing space.
