## Overview

How much does energy storage cost?

Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power. It also helps them handle money risks. As prices drop and technology gets better, people need to know what causes these changes.

Why are energy storage systems so expensive?

Energy storage systems (ESS) for four-hour durations exceed \$300/kWh, marking the first price hike since 2017, largely driven by escalating raw material costs and supply chain disruptions. Geopolitical issues have intensified these trends, especially concerning lithium and nickel.

What is the cheapest way to store solar power?

When considering the cheapest way to store solar power, options such as DIY battery systems, pumped hydro, compressed air, flywheel energy storage, molten salt tanks, ice storage, gravity systems, hydrogen fuel cells, thermal storage, and capacitor banks can offer varying costs and efficiencies.

How much does energy storage cost in 2024?

As we look ahead to 2024, energy storage system (ESS) costs are expected to undergo significant changes. Currently, the average cost remains above \$300/kWh for four-hour duration systems, primarily due to rising raw material prices since 2017.
