

Huawei Philippines Cebu Home Inverter

Overview

Is Huawei a reliable inverter manufacturer?

Huawei, a Chinese consumer electronics and IT equipment manufacturer founded in 1987, has made a successful entry into the home photovoltaic inverter market. In 2018, they introduced a competitive product, and in 2020, they launched the second generation of home hybrid inverters. Huawei's inverters have been well-received in the market.

Do Huawei inverters work with energy storage units?

Huawei inverters are adapted to work with energy storage units (L1 and M1 series). You can choose from an LG or Huawei Luna2000 battery. These inverters can function without optimizers, just like classic string inverters, and optimizers can be used under selected PV modules.

Do Huawei inverters support island operation?

Huawei inverters do support island operation, but it requires the use of a back-up box in addition to energy storage. In case of a power grid failure, the inverter switches to island operation and reverts to on-grid operation once the failure is resolved.

What is a second generation Huawei inverter?

The second generation of Huawei inverters was released in April 2020. The SUN2000-L1 series, covering powers from 2kW to 6kW, features two MPPT inputs and an operating voltage range from 100V to 600V. The SUN2000-L1 model is a hybrid inverter ready to connect to an energy storage facility.
