

# Huawei s flow battery safety design solution

## Overview

---

Huawei's solution involves doping sulfide electrolytes with nitrogen, reducing harmful side reactions and improving both safety and battery lifespan. Why is Huawei developing a solid-state battery?

Huawei's design aims to boost safety and cycle life by mitigating degradation at this critical junction. Huawei's involvement in solid-state battery research reflects a broader trend among Chinese technology and automotive companies. While Huawei does not manufacture power batteries, it has shown increasing interest in upstream battery materials.

Does Huawei have a sulfide battery?

Huawei has intensified its ambitions in advanced energy storage by patenting a sulfide-based solid-state battery capable of achieving driving ranges of up to 3,000 kilometres and ultra-fast charging in just five minutes.

Does Huawei make power batteries?

While Huawei does not manufacture power batteries, it has shown increasing interest in upstream battery materials. Earlier in 2025, the company filed a separate patent on the synthesis of sulfide electrolytes — a key material known for its high conductivity but also high cost, sometimes exceeding the price of gold.

What is Huawei EV battery technology?

This technology tackles a persistent challenge in the battery industry: degradation of liquid electrolytes. By substituting liquid components with solid electrolytes, Huawei aims to upgrade energy storage systems, especially for EVs. Current battery technology uses liquid or gel electrolytes to transfer lithium ions between the anode and cathode.

## Huawei s flow battery safety design solution
