

# India s grid-connected solar panels

## Overview

---

There are five main components involved in the making of a grid-connected solar system. All these components work together to generate electricity from sunlight and supply power to the household appliances af.

Can solar power be integrated into India's existing power grid?

Surpassing 100 GW of installed solar capacity by the end of FY 2024-25 demonstrates significant progress in India's renewable energy journey. However, seamlessly integrating this variable energy source into the existing power grid presents complex technical, economic, and regulatory challenges.

What is a grid connected solar system?

Components and Prices Explained A solar system connected to the utility grid through a bi-directional net meter is known as a grid-connected PV system. It is known by various names, including a grid-connected energy system, a grid-tied solar system, and an on-grid solar system.

How much does an on-grid solar system cost in India?

An on-grid solar system includes: Total: ₹45,500 – ₹69,000 per kW, before subsidies. 4. Average On Grid System Cost in India (2025).

Are grid-connected solar rooftop installations a key component of India's solar power capacity?

This shows that grid-connected solar rooftop installations are a significant and growing component of India's overall solar power capacity. To further increase its share and empower households to generate their own electricity, the Government of India has launched PM Surya Ghar: Muft Bijli Yojana in February 2024.
