

Is it better to install energy storage or solars

Overview

Should I install more solar panels?

However, if you have a big battery that is not being fully charged regularly by your solar panels, adding more panels is the better option. All things being equal, installing more solar panels generally provides more benefits in terms of energy generation, long-term cost savings and overall efficiency.

Should I add more solar panels to my battery?

If you have a large battery but are not filling it up regularly with solar energy, adding more PV panels is more advisable to maximise the battery's potential. This means you'll be making the most of your battery's storage capacity and not relying too heavily on the grid to charge it.

Why should you install more solar panels?

All things being equal, installing more solar panels generally provides more benefits in terms of energy generation, long-term cost savings and overall efficiency. Solar panels have a longer lifespan than batteries and directly contribute to generating clean, renewable energy for your home.

Why should you combine solar panels with battery storage?

By combining solar panels with battery storage, you can store excess energy generated during the day and use it later when electricity demand is high or during power outages. This allows you to have a consistent power supply throughout the day, regardless of fluctuations in energy availability or utility rates.
