

Low-voltage containerized photovoltaic energy storage system for research stations in Thailand

Overview

The increasing proportion of distributed photovoltaics (DPVs) and electric vehicle charging stations in low-voltage distribution networks (LVDNs) has resulted in challenges such as distribution transformer overloading.

What is a photovoltaic energy storage power station?

Photovoltaic energy storage power station is a combined operation system including distributed photovoltaic system and energy storage system. The overall structure of a photovoltaic storage power station is shown in Figure 1. Figure 1. Photovoltaic energy storage power station.

What is the mathematical model of a photovoltaic energy storage power station?

The mathematical model expression of the photovoltaic system in the photovoltaic energy storage power station is as follows: In formula (1), N_p and N_s represent the number of series capacitors and parallel capacitors in a photovoltaic system respectively. U_{pv} and I_{pv} represent the total voltage and current, respectively.

What is the optimal energy storage power of photovoltaic energy storage?

The optimal energy storage power of photovoltaic energy storage power station is obtained based on the real-time data such as the charge state of the storage system. This paper constructs an optimal voltage control model through ADP algorithm and obtains the optimal coordinated control strategy.
