

Monitor ups uninterruptible power supply configuration

Overview

How do I monitor APC uninterruptible power supply (UPS) devices?

Domotz network monitoring software allows you to monitor APC Uninterruptible Power Supply (UPS) devices. We provide pre-configured SNMP template and a custom script for APC UPS devices. Use them to monitor metrics such as battery status, voltage, current, temperature, estimated remaining minutes, and charge level.

How do I access the parameters of an uninterruptible power supply?

The easiest way to gain access to the parameters of uninterruptible power supplies (UPS / UPS brands APC, Powercom and others) is to use the modern USB or outdated COM interfaces. The UPS is connected to the monitoring computer with a cable and is usually monitored and configured through the proprietary software.

What is ups monitoring?

UPS monitoring is the process of monitoring the different metrics of UPS devices in a network, including voltage, current, battery status, and charge, so they are always up, available, and working. Monitoring critical performance metrics is crucial for maintenance, uptime, and to upgrade your power system to handle extended outages.

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient- free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable
