

Motorhome to 220v inverter

Overview

Do you need an inverter for a camper?

Most people who use campsites regularly probably don't need to bother about fitting an inverter in their motorhome or camper. After all, the idea of it is to change 12v power from the leisure battery into 230v power which can be used to power appliances like laptops and hairdryers.

How do I use a motorhome inverter?

We share new videos with tips for motorhoming and campervanning in the UK and Europe weekly, plus road trip ideas and epic destinations. The easiest way to use a motorhome inverter is to plug your device or appliance straight into the 230v 3-pin plug socket actually on the inverter.

Can a 230V inverter power a fridge?

Equally, if you have a device that runs off gas, such as a fridge, that will let you wild camp for longer than powering it off 12V, or an inverter. Inverters are powered from your leisure battery, and the amount of time the inverter can sustain 230V power is directly proportional to battery capacity.

How big should a motorhome inverter cable be?

In general, if in doubt about cable size, go up a size. If your motorhome's layout means the inverter is some distance from the leisure batteries, you will need to increase the diameter of your cabling to allow for this, and for larger inverters – over 2000W – it's not a good idea to have cable runs over 2m.
