Overview

What is a nano supercapacitor?

A nano supercapacitor is a type of capacitor that is being developed. It is being developed primarily as part of a hybrid battery-capacitor system for electric cars. Nano supercapacitors can be charged or discharged at a very high rate, while batteries, particularly lithium-ion, store large amounts of energy but have more difficulty with high power or fast recharge.

Where can I buy supercapacitors & ultracapacitor?

The link could not be generated at this time. Please try again. Supercapacitors & Ultracapacitors are available at Mouser Electronics from industry leading manufacturers. Mouser is an authorized distributor for many supercapacitor and ultracapacitor manufacturers including Cornell Dubilier, Eaton, Elna, KEMET, KYOCERA AVX, Maxwell, Vishay & more.

Can carbon nanomaterials be used in supercapacitors?

On the other hand, the relatively high cost compared to commercial mesoporous and/or activated carbon is another challenge for carbon nanomaterials to be scaled up for practical application in supercapacitors. Therefore, it is highly desirable to develop carbon nanomaterials with high charge capacity at a low cost (e.g. by ball milling).

What is the market share of supercapacitors in 2024?

By configuration, Electric Double-Layer Capacitors led with 55.2% of the supercapacitors market share in 2024, while Hybrid Supercapacitors are projected to expand at an 18.1% CAGR through 2030. By form factor, modules commanded 57.8% share of the supercapacitors market in 2024, and packs are forecast to grow at 17.4% CAGR to 2030.
