

Nordic liquid flow battery energy storage peak load regulation

Overview

What is liquid flow battery energy storage system?

The establishment of liquid flow battery energy storage system is mainly to meet the needs of large power grid and provide a theoretical basis for the distribution network of large-scale liquid flow battery energy storage system.

Does a lithium-ion battery provide inertial response in the Nordic power system?

Only FCR-D is considered since there is currently no market for providing inertial response in the Nordic power system. The characteristics of the lithium-ion battery system used in these estimations are from Table 6.1. Efficiency is assumed to be 0.95 %, SOC limits are at 10 and 90 %, and initial SOC is kept at 50 %.

Is power system frequency stability at risk in the Nordic power system?

LUCAS THOMÉE, 2018. With increased integration of converter connected production, decommission of nuclear power plants in Sweden, reduction in frequency dependent loads, and increased import through HVDC links, the power system frequency stability in the Nordic power system is at risk.

Can flow battery energy storage system be used for large power grid?
