

PLC uninterruptible power supply capacity

Overview

What is an industrial uninterruptible power supply?

The 1609 family of Industrial Uninterruptible Power Supplies is designed for industrial applications – with features required for remote control and operation inside of industrial control panels. • Flexibility to meet most installation scenarios, included control panels typically used in production environments.

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient- free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable.

What is cu8110-0120 power supply?

Please refer here to our Privacy Policy. CU8110-0120 is a capacitive, uninterruptible power supply (UPS) providing up to 0.9 Wh with a maximum output power of 110 W. If the external 24 V DC input voltage is lost, the UPS takes over the supply of the devices connected to it thanks to its regulated and buffered 24 V DC output voltage.

How many outputs does an ups have?

The UPS has a total of two 24 V outputs. In addition to the industrial PC, a panel or terminal segment can be supplied with uninterrupted power on the second output. OCT (One Cable Technology), USB 2.0, and digital signals are available for communication between the UPS and the industrial PC.
