

Palestine Communications 5G Base Station 2MWH solar

Overview

What is Palestine's energy strategy?

Palestine's approach is to prioritize high-emitting sectors such as, power generation (62 %), transport (15 %), and waste (23 %). The National Adaptation Plan is as: increase the share of renewable energy in electrical energy mix by 20–33 % by 2040, primarily from solar PV. Improve energy efficiency by 20 % across all sectors by 2030.

What is the electrical energy system in Palestine?

The electrical energy system in Palestine state is different from any other country, because Palestine imports its energy from three different sources; from Israel (85 %), Jordan (2 %) and Egypt (3 %). In addition to 140 MW capacity diesel-fired combined cycle power station.

Does Palestine have a potential for PV power generation?

The System Advisor Model software (SAM) was used to predict the power potentials for a year. The results indicate that Palestine has a significant potential for PV power generation within 1,700 kWh/kWp.

Is Palestine a good place for solar energy?

With 3,400 hours of sunlight per year and an average daily global solar radiation ranging from 6.15 to 8.27 kWh/m², Palestine has a great potential for solar energy. The capacity of rooftop solar systems to produce power in the WB and GS is 534 and 163 MW, respectively.
