What is cadmium selenium tellurium (CdSeTe)?

In modern cells, cadmium selenium tellurium (CdSeTe) is often used in conjunction with CdTe to improve light absorption. Learn more about how solar cells work. CdTe solar cells are the second most common photovoltaic (PV) technology after crystalline silicon, representing 21% of the U.S. market and 4% of the global market in 2022.

How are cadmium telluride modules manufactured?

The manufacturing process for cadmium telluride modules can be split into 4 main steps: Cadmium and tellurium are byproducts of mining operations for zinc and copper, respectively. The waste from these mining processes have so far produced more than enough Cd and Te, so no extra mining is needed.
