

Port Moresby Industrial and Commercial Energy Storage Peak-Valley Arbitrage Program

Overview

How does Bess generate revenue from electricity price arbitrage and reserve service?

It generates revenue through electricity price arbitrage and reserve service. The BESS's optimization model and the charging-discharging operation control strategy are established to make maximum revenue. The simulation study is based on one-year data of wind speed, irradiance, and electricity price in Hangzhou City (Zhejiang Province, China).

What is a Bess optimization model for electricity price arbitrage and reserve ancillary services?

Taking the maximum annual net revenues of the BESS as the optimization objective, an optimization model of the BESS considering both electricity price arbitrage and reserve ancillary services is established. The annual net revenues of the BESS under different BESS capacities are evaluated.

How can a large-scale energy storage system help a power surge?

Large-scale RE connected to the grid will bring a power surge or power failure. By constructing a suitable battery energy storage system (BESS) and RE coupling system, using the BESS to store and release RE to stabilize RE's volatility and intermittent, thereby increasing RE's penetration and resilience ,

What is the monthly electricity revenue of Bess & reserve ancillary services?

As can be seen from Fig. 9, the monthly electricity revenue of the BESS varies from 11,055 \$ to 14,685 \$, and the monthly reserve ancillary services revenue of the BESS varies from 2072 \$ to 2410 \$. The electricity revenue of the BESS is about five times that of the reserve ancillary services revenue. Fig. 9.
