

# **Power 3G base station equipment indoor and outdoor**

## Overview

---

CableFree offers a complete range of 2G & 3G products featuring advanced cellular technology to support legacy wireless networks. Ideal for Public as well as Private Cellular networks, featuring latest indu.

How many mobile devices can a base station serve?

Each base station can only serve a limited number of mobile devices at a time. As the number of mobile devices in a community grows, more base stations are needed. For that reason, more antennas are needed in such crowded locations as shopping malls where there are many mobile phone users.

What is CableFree 2G & 3G?

CableFree 2G & 3G is a modern, fully-supported hardware & software platform to enable GSM, GPRS & UMTS connectivity at very low cost & power consumption compared to legacy equipment vendors. CableFree 2G and 3G Software Defined Base Stations offer advanced features and “stand alone” capability for public or private networks.

What is 2G & 3G technology?

Our 2G & 3G technology offers latest base station technology and transmit powers up to 50W for high capacity, long range networking, and uses Software Defined Radio technology with easy upgrade to new features and high capacities.

Do mobile phones need a base station?

Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible.

## Power 3G base station equipment indoor and outdoor
