

Power battery PAck and modules

Overview

What are battery cells & modules & packs?

Battery cells, modules, and packs are different stages in battery applications. In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module.

How a battery pack works?

In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module. Several modules can be combined into a package.

What is the difference between battery module and battery pack?

Battery Module: A group of interconnected battery cells that increases voltage and capacity compared to individual cells. It includes wiring and connectors and may feature a basic battery management system (BMS) for monitoring.
Battery Pack: A complete energy storage system containing one or more modules.

What is a battery pack?

A battery pack consists of multiple battery modules integrated to form a complete energy storage solution. Packs are engineered to deliver the required power and energy for specific applications. Modules: Combined in series and parallel to achieve the desired voltage and capacity.
