

# Price of a 20-foot photovoltaic container in the United States

## Overview

---

The average 2024 price of a BESS 20-foot DC container in the US is expected to come down to US\$148/kWh, down from US\$180/kWh last year, a similar fall to that seen in 2023, as reported by Energy-Storage.news, when CEA launched a new quarterly BESS pricing monitor. How efficient is a residential PV system in 2024?

The representative residential PV system (RPV) for 2024 has a rating of 8 kW dc (the sum of the system's module ratings). Each module has an area (with frame) of 1.9 m<sup>2</sup> and a rated power of 400 watts, corresponding to an efficiency of 21.1%.

What is the representative commercial PV system for 2024?

The representative commercial PV system for 2024 is an agrivoltaics system (APV) designed for land that is also used for grazing sheep. The system has a power rating of 3 MW dc (the sum of the system's module ratings). Each module has an area (with frame) of 2.57 m<sup>2</sup> and a rated power of 530 watts, corresponding to an efficiency of 20.6%.

How much electricity does a solar PV system produce?

The module rails and fasteners are imported from China and subject to 25% tariff. The DC conductors are connected to 220 three-phase string inverters, each rated at 10 kW ac, giving the PV system a rated AC power output of 2.2 MW ac, which corresponds to an inverter loading ratio of 1.37.

How does Seto calculate PV system cost?

Unlike most PV cost studies that report values solely in dollars per watt, SETO's PV system cost benchmark reports values using intrinsic units for each component. For example, the cost of a mounting structure is given in dollars per square meter of modules supported by that structure.

## Price of a 20-foot photovoltaic container in the United States
