

# **Regulations on uninterruptible power supply batteries for solar container communication stations**

## Overview

---

What is an uninterruptible power supply system (UPS)?

2.1 An uninterruptible power supply system (UPS) is defined as a device which for a specific period of time supplies continuous power to radio equipment independent of any power failures in the ship's main or emergency source of electric energy.<sup>2</sup> rechargeable accumulator batteries, complying with the requirements of annex 1.

What is a Bess uninterruptible power supply (UPS)?

ning of the BESS's safety functions.GoalsG.1 Uninterruptible Power Supply (UPS) maintains continuity of load power to the essential safety systems of the BESS at all times, except than for scheduled operations fo.

Why should a ups be protected from a short-circuit?

The UPS should be so designed and constructed that it is protected against damage resulting from disconnecting the batteries or, with the battery disconnected, short-circuiting the UPS battery connections. If this protection is provided by electronic means it should automatically reset following removal of the open or short-circuit conditions.

What is UPS battery capacity?

The UPS battery capacity is, at all times, to be capable of supplying the designated loads for the time specified in the regulations. 53.3 On restoration of the input power, the rating of the charge unit shall be sufficient to recharge the batteries while maintaining the output supply to the load equipment.
