Overview

What is a solar tracking system?

A solar panel precisely perpendicular to the sun produces more power than one not aligned. The main application of solar tracking system is to position solar photovoltaic (PV) panels towards the Sun. Most commonly they are used with mirrors to redirect sunlight on the panels.

How a solar tracker works?

A solar tracker should be positioned at the solar panels at an angle directed to the sun. It is an advanced sun monitoring system that can rotate the panels to track the movement of the sun across the sky. It facilitates the panel system to make the maximum absorption of the sunlight and optimize the energy output.
