## Overview

---

Can a steel structure roof be used for solar panels?

As a large area with good sunlight exposure, the steel structure roof is ideal for installing and constructing photovoltaic power generation facilities. Installing solar panels on steel buildings is particularly important to support the electricity consumption of metal buildings.

Can solar be installed on a metal roof?

The primary challenge in mounting solar on a metal roof is that brackets must attach using penetrative fasteners. The crucial step in this installation is to use a proper sealant to cover the holes, preventing water leakage, which can later cause severe damage to the roof. The S-5!

Can you install solar on a corrugated metal roof?

The S-5! Corrubracket includes a factory-applied butyl sealant in its base, a suitable option for efficiency and ease of installation. However, it is crucial to check with the roof manufacturer's warranty before installing solar on a corrugated metal roof, as penetrations can sometimes void the warranty.

How are photovoltaic panels installed?

When the steel frame, roof truss, and purlins meet the design requirements, and the roof panels are relatively rigid, this method is a more reasonable installation condition. The photovoltaic brackets are connected to the roof panels using connectors and fixed as close to the purlins as possible.
