

# Size of solar panels installed by farmers

## Overview

---

How can farmers benefit from solar energy?

Farmers can benefit from solar energy in several ways—by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics. Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath solar panels and/or between rows of solar panels.

Can you install solar panels on farmland?

Yes, you can install solar panels on farmland, and it's becoming a popular choice for farmers who want to diversify their income while embracing renewable energy. Agricultural solar panel installations are often referred to as "solar farms" or "agrivoltaics" (combining agriculture and photovoltaics).

How big should a solar farm be?

The size of a solar farm largely depends on the available land, the energy goals, and budget. Solar farms can vary greatly, from small installations that power a single farm to larger setups capable of powering thousands of homes. Typically, around 15 acres of land can accommodate around 4.5MW solar PV array, the system can generate up to 6.23GWH.

How do I choose a solar panel for my farm?

Look for Solar PV panels with higher efficiency ratings to boost energy production, especially in areas where sunlight may be limited. Agricultural land is often subject to exposure from weather, livestock, and machinery, so it's important to select durable, reliable solar panels.
