

Solar panels on the roof of a large factory

Overview

Can solar panels be installed on a factory roof?

The roofs of factories are often the ideal place to install solar panels. As factories are energy-intensive buildings, installing a solar PV system on the roof of a factory ensures free power can be generated to run everything underneath it.

What is an industrial rooftop solar system?

An industrial rooftop solar system is specifically designed to meet the high energy demands of factories, warehouses, and large-scale production units. Unlike residential systems, rooftop solar for manufacturing units involves higher capacity, more complex wiring, and specialized components to support industrial-grade equipment.

How do industrial rooftop solar panels work?

In short, a solar system for factories transforms underused industrial rooftops into active revenue-saving resources, delivering both financial and environmental returns. To fully understand how solar panels work in industry, it's essential to break down the key components of a typical industrial rooftop solar system.

Can a factory use rooftop solar?

A standard solar system for factories can range from 100 kW to several megawatts, depending on the site's connected load and power usage patterns. Key areas where rooftop solar for manufacturing units prove effective include running energy-intensive machines like chillers, air compressors, furnaces, extrusion lines, and injection molding systems.
