

Solar panels transported on the factory roof

Overview

Can solar panels be installed on a factory roof?

The roofs of factories are often the ideal place to install solar panels. As factories are energy-intensive buildings, installing a solar PV system on the roof of a factory ensures free power can be generated to run everything underneath it.

How do solar panels work on a factory roof?

Sunlight Absorption Solar panels on the factory roof capture sunlight. Through the photovoltaic effect, solar cells convert light into direct current (DC) electricity. DC Generation This raw DC power is collected and channeled via cables into the inverter system. The energy output depends on the sunlight intensity and panel efficiency.

Can a commercial solar power system fit a factory or warehouse roof?

Commercial Solar power systems can be customised to fit factory and warehouse roofs' specific design, size, and energy consumption profile, maximising energy capture and efficiency.
