

# **Solar-powered automated containerized vehicle supplier delivery time**

## Overview

---

Are autonomous vehicles the future of logistics & supply chain management?

Autonomous vehicles (AVs) are no longer just a futuristic concept; they are rapidly becoming a reality in logistics and supply chain management. These self-driving vehicles promise to revolutionize the industry by enhancing efficiency, reducing costs, and minimizing human error.

Are autonomous delivery robots the future of logistics?

Similarly, autonomous delivery robots are being deployed in urban areas for last-mile delivery services, showcasing the potential to streamline the delivery process and reduce congestion (Lopac, Jurdana, Brnelić, & Krljan, 2022) . Looking ahead, several key trends are poised to enhance the capabilities of AVs in logistics further.

How AV technology is transforming logistics?

Currently, the integration of AV technology in logistics is in its nascent stages but is rapidly advancing. Companies across the globe are piloting autonomous delivery vehicles, drones, and automated warehouse systems to enhance efficiency, reduce human error, and decrease operational costs.

Which companies are experimenting with autonomous delivery vehicles?

One prominent example is Walmart, which has been at the forefront of experimenting with autonomous delivery vehicles. In its pilot program, Walmart partnered with several tech firms to automate delivery processes for last-mile logistics.
