

South Sudan Communication 5g base station installed 100KWh

Overview

Is South Sudan lagging behind in telecommunications development?

Compared to the United States, South Sudan is massively lagging behind in the development of telecommunications. Under the country code +211, there were a total of 6.17 million connections in 2023. Among them were 6.17 million mobile phones, which corresponds to an average of 0.54 per person. In the US, this figure is 1.2 mobile phones per person.

Does South Sudan have a good internet connection?

South Sudan is lagging behind in the expansion of broadband internet connections. Around 12 percent of all residents have access to the internet. Around 0 percent have their own fast internet connection, which is at least faster than the former ISDN (more than 256 kbit/s).

How to evaluate a 5G energy-optimised network?

To properly examine an energy-optimised network, it is very crucial to select the most suitable EE metric for 5G networks. EE is the ratio of transmitted bits for every joule of energy expended. Therefore, while measuring it, different perspectives need to be considered such as from the network or user's point of view.

Which countries are most engaged in 5G sleep mode procedures?

The predominance of sleep mode procedures is evident in the selected survey studies. Notably, China, Korea, and the US are vigorously engaged in this field, specifically related to the 5G network.
