

Super double layer capacitor in Arequipa Peru

Overview

What are electric double layer capacitors?

Electric double layer capacitors, namely super-capacitors, are used mainly to assist other power supplies in coping with surge power requirements particularly in electric/hybrid vehicles. The Shanghai municipality tested electric buses powered by supercapacitors (capabuses).

What are low-resistance electric double-layer capacitors (EDLC/supercapacitors)?

Low-resistance electric double-layer capacitors (EDLC/supercapacitors) are effective as capacitors for providing supplementary power during peak output, backup during power supply loss, energy harvesting, or energy recovery. They are thin and lightweight, which makes them appealing for use in mobile products.

What are supercapacitors & EDLC?

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors.

What are electric double-layer capacitors (EDLCs)?

In supercapacitors, the electrical double layer formed next to a large-area electrode and an electrolyte is effectively used, and hence these devices are technically called electric double-layer capacitors (EDLCs). At this stage, it is worth summarizing the difference between electrochemical (EC) cells and electrochemical capacitors.
