

The inverter has peak power

Overview

What is peak power in inverter?

Peak power is usually two to three times the rated power. The rated power is the power at which the inverter is stabilized over a long period, whereas the peak power is only used for short periods of high power demand. .

When can an inverter start?

Because these inductive loads require a large current to start at the moment of startup, the appliance can start normally only when the inverter peak power is greater than the starting power of the appliance. Under normal circumstances, the peak power is equal to 2 times the rated power. 2. Different types of load.

How big a power inverter is needed?

When determining how large a power inverter is needed, the difference between rated power and peak power must be distinguished. Peak power is also called peak surge power, which is the maximum power that can be maintained in a short period of time (usually within 20ms) when the power inverter starts.

What happens if an inverter overloads?

If the total load exceeds this value, the inverter will be damaged due to constant overloading. What is Peak Power?

Peak Power, also known as Surge Power, represents the maximum power value that the inverter can deliver in a short period (usually 0.5~5 seconds).
