

The price of wind power flywheel energy storage

Overview

Current flywheel installations average \$1,100-\$1,500 per kW compared to \$700-\$900/kW for lithium batteries [1] [10]. However, when considering total lifecycle value, the picture changes dramatically. Are flywheel energy storage systems economically feasible?

Equipment cost distribution for the flywheel energy storage systems. FESSs are used for short-duration power applications. Therefore, power capital cost (\$/kW) could be a useful parameter to compare the economic feasibility of energy storage systems for similar power applications.

What is the market share of Flywheel energy storage in 2025?

Utility will dominate with a 46.8% market share in 2025. The flywheel energy storage market is projected to reach USD 1.3 billion in 2025 and expand to USD 2.0 billion by 2035, advancing at a CAGR of 4.2 % during this period.
